BH2480 CIRCULATING DEODORIZATION SYSTEM

Dual filtration modules achieve a deodorization efficiency of up to 80%, effectively addressing the challenge of farm odor control.

PIG PRODUCTION

Technical Description

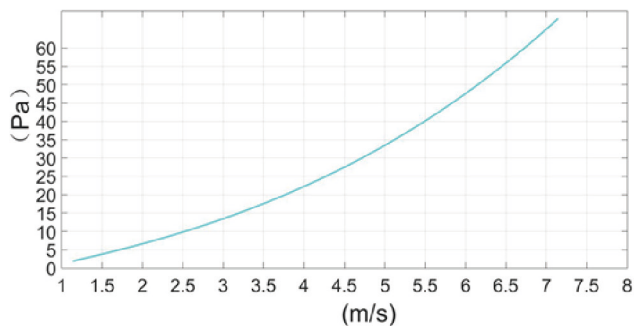

- The exhaust passes through the first-stage water spray wall, removing dust particles and some odour.
- The second-stage hypochlorous acid filter wall further removes residual odours with remarkable effectiveness.
- The top spray design saves 50% water compared to traditional side spray systems.
- Diaphragmless electrolysis technology generates high-concentration hypochlorous acid water, ideal for large-scale farms with lower equipment and operational costs.

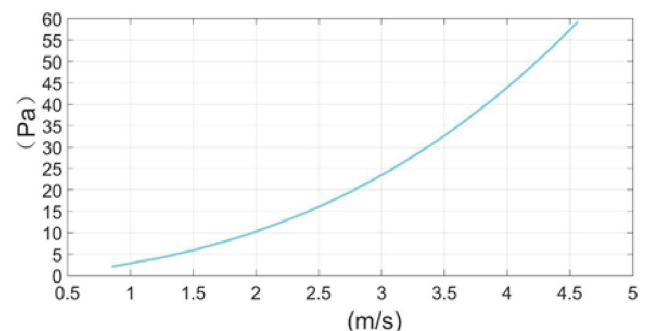

**2----- TWO DEODORIZING
MODULES**

**4----- SOLVES FOUR MAJOR
PAIN POINTS**

**80--- 80% DEODORIZING
EFFICIENCY**

**Relationship between air velocity and
filter package pressure at 450mm**

**Relationship between air velocity and
filter package pressure at 900mm**
